

CYBERPUNK DEV

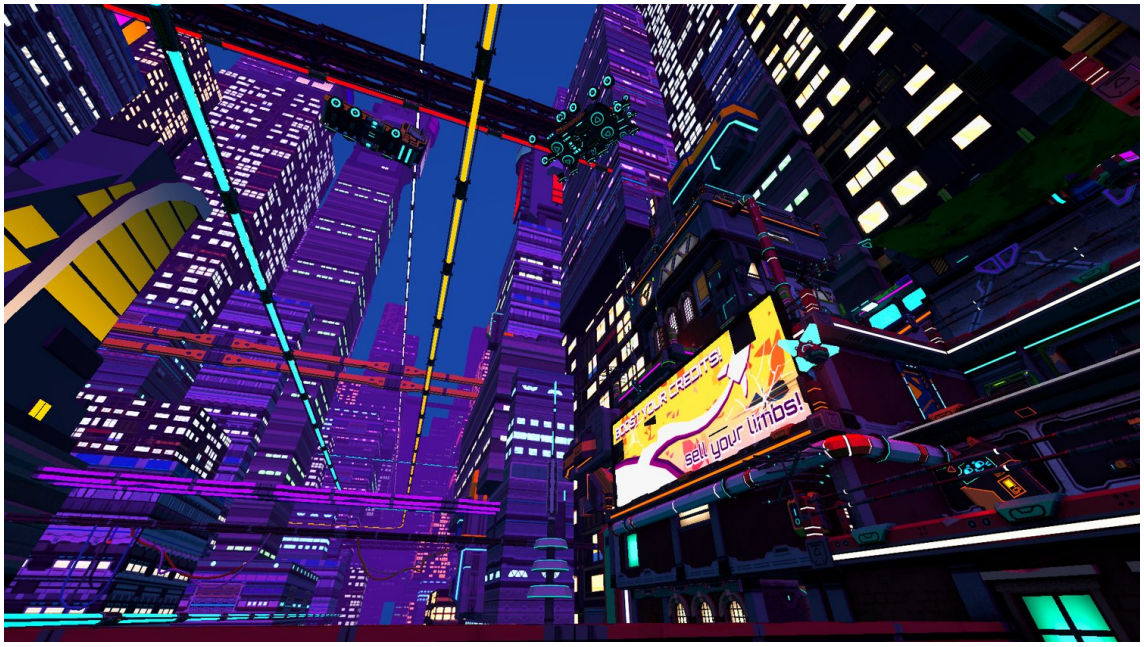

A cinematic cyberpunk action-RPG and space opera built in Unity 6

Protagonist: Alita, Berserker Unit 99 | Engine: Unity 6 (URP 17.6) | Platform: Windows PC

1. Abstract

Cyberpunk Dev is a single-player, story-driven action game built in Unity 6. The player controls Alita, a 300-year-old Martian war cyborg discovered broken in the Iron City scrapyard and rebuilt by the surgeon Dr. Dyson Ido. The game follows her from that discovery, through a memory flashback to the lunar war known as The Fall, into a neon metropolis with a four-mission underworld campaign, across a rogue-AI cyberspace barrier and a lawless asteroid black market, and finally to Mars, where she faces the Colossus-06 Hammer Titan War Mech.

The project combines fast katana and gun-kata combat, single-take cinematic cutscenes, an open city with air traffic and crowds, six-degree-of-freedom starship flight and multi-phase boss fights. Most levels are driven by custom runtime director scripts rather than Timeline, and much of the UI, dialogue and sound design is generated in code.

Cyber City: 15 hover cars on three spline skyways above the streets.

Project at a glance

Genre	Cinematic cyberpunk action-RPG / space opera
Engine	Unity 6 (6000.6.0f1), Universal Render Pipeline 17.6, C#
Scale	About 25 scenes: narrative, arenas, spaceflight, showcases, benchmarks
Story	Nine acts from the scrapyard to the Siege of Mars and the epilogue
Combat	7-hit katana combo, dodge roll, bullet time, gun-kata, multi-phase bosses
Voice	Neural text-to-speech lines for Ido, Alita, Cynosure, Vulcan and Voss

2. Story, act by act

Act I - The Scrapyard Discovery

Under acid rain in the Iron City scrap heaps, Dr. Ido finds a warm antimatter core and an intact human brain inside a ruined torso. One continuous camera move follows him clearing debris, scanning her vitals and carrying her home.

Act II - Clinic Restoration

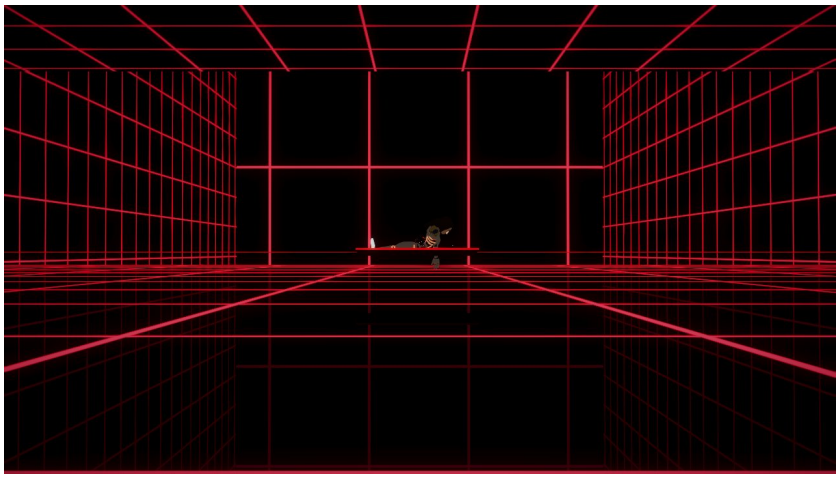

Ido grafts her core and brain into an antique porcelain DollBody. Her eyes ignite and he welcomes her back.

Act III - TRON Awakening (120 s)

Inside her boot sequence: a physical CRT terminal, a laser burst, a voxel rebuild of her body, then her eyelids opening on a Nine Inch Nails track.

Act IV - The Fall (52 s flashback)

The lunar battle of Year 2263. Alita is a U.R.M. shock trooper beside Commander Gelda, fighting under a huge Earth while starfighters dogfight overhead.

The TRON awakening cutscene.

The Fall: Alita remembers the lunar assault.

Act V - Cyber City and the missions

Alita enters the open metropolis and the underworld campaign:

- **Mission 1, The Street Trial:** an escort through hostile streets and a multi-wave bridge ambush, ending at the server-room airlock.
- **Mission 2, Steal the Pit Pass:** Ido calls about a scalper holding a VIP Pit pass. Alita chases them along a roughly 210 m route with rubber-banding, corners them and takes the pass.
- **Mission 3, The Pit:** a gladiator ladder in a 56 m colosseum with 550 spectators and euro-dollar purses.
- **Mission 4, Vulcan Showdown:** the lights cut and Forge-Lord Vulcan drops in for a three-phase boss duel ending in an execution prompt.
- **Mission 5, The Server Room:** after the Pit, Ido calls for help from a bridge. Vulcan stabs him and throws him off. Alita then heads for the sealed server room door, which opens into the Blackwall.

The 56 m Pit colosseum: grandstands, 550 spectators and a central duel ring.

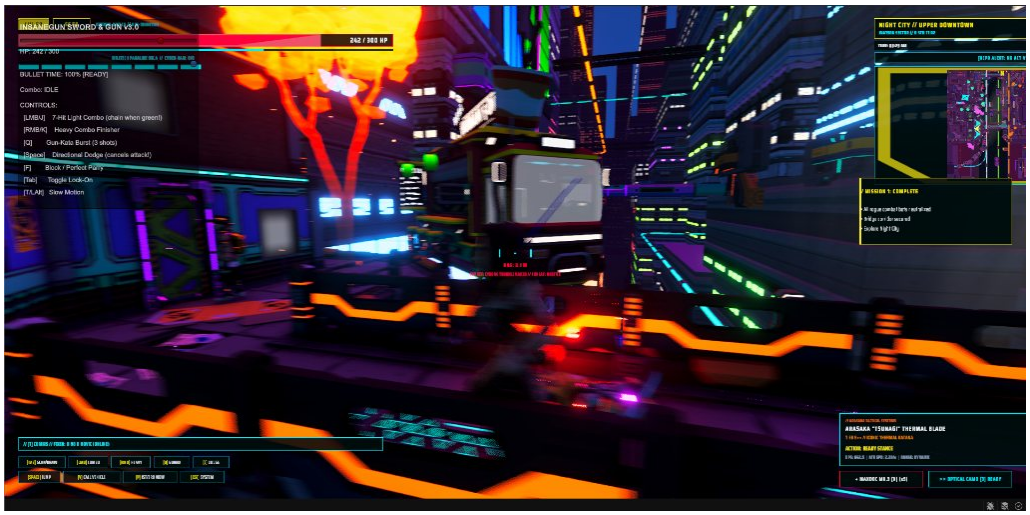

Acts VI to IX

- **Beyond the Blackwall:** a 200 m audio-reactive barrier, a mirror-water floor, a 16 m LiDAR face (Cynosure-09) and waves of holographic rogue-AI enemies.
- **Sector 04 Black Market (DRIFT):** Alita flies into an asteroid port, retrieves four core matrices with a tractor beam and meets The Collector, who betrays her. A catwalk collapses, she fights through the trench and escapes on Pad B-04. Coordinates for Mars unlock.
- **The Siege of Mars:** arrival over Cydonia Basin beneath Phobos, a dust storm, star destroyers overhead and the Colossus-06 boss with its rocket war hammer.
- **Epilogue:** a standoff with the robed Corporation Overseer in deep space, leading into the credits.

3. Gameplay systems

Combat

- **Katana combo:** seven directional light hits (swipe, backhand, uppercut, thrust, overhead cleave, 360 degree spin and an oversized finisher).
- **Heavy strikes and sidearm:** charged finishers that crack the ground, plus a gun-kata pistol.
- **Dodge and bullet time:** a four-way dodge roll with invulnerability frames, and slow motion at 0.25x speed with an energy meter.
- **Hit feel:** hit-stop on every connect, additive ribbon trails on the blade and ragdolls that inherit the impact direction.

In-game combat HUD: health, stamina, quest tracker and weapon diagnostics.

Characters, bosses and flight

- **Alita's three bodies:** the broken scrapyard core, the porcelain DollBody with an 88-blendshape facial rig, and nano Berserker armour.
- **Boss platform:** Goliath and Hammer mechs with 32 combat animations, two-handed grip IK, rocket boosters and telegraphed ground rings.
- **Starship flight:** arcade 6-DOF handling at 55 m/s cruise and 120 m/s afterburner, plasma weapons, a tractor beam and a hyperspace jump.

Living world and interface

- **City:** a monorail, behavior-tree crowds and 60+ black-market NPCs that patrol, talk and steer around walls. NPCs only fight back once Alita attacks them.
- **UI:** a Cyberpunk-2077-style HUD with a quest tracker under the minimap, and a themed dialogue HUD with colour-coded portraits and typewriter text.
- **Audio:** layered black-market ambience that ducks during dialogue, and a dedicated chase track for the Mission 2 pursuit.

4. Technology and production

Rendering	URP Forward+, linear colour, ACES tonemapping, bloom, SSAO, planar mirror reflections, rain-on-lens effects, a dozen custom shaders
Physics	Hybrid kinematic and dynamic character controller, SuperCharacterController, Euphoria-style ragdolls
Audio	3D spatial audio, 64-band FFT analyser, C# software synthesizers, crossfaded mission music
Voice	Edge-TTS neural speech generation for the main cast
Input / Net	New Input System with legacy fallback, Netcode for GameObjects multiplayer foundation
Art	Synty Polygon packs (Cyber City, Sci-Fi Worlds, Mech, Sci-Fi Space, Sidekick) plus procedural arenas, terrain and Blackwall mesh
Tooling	40+ custom editor tools and scene builders; MCP for Unity for editor automation
